

Gabriel Fernando Castillo Mendieta

Backend and Integration Engineer

Tunja, Colombia · Remote | gabo8191@gmail.com | linkedin.com/in/gabodev8191 | github.com/gabo8191 | gabo8191.github.io/portfolio

PROFESSIONAL PROFILE

I build backend systems and integrations and diagnose production incidents. I have over three years of remote experience with APIs, SQL, queues, financial messaging, electronic invoicing and internal tools using Python/Django, NestJS, Laravel and Java.

EXPERIENCE

BI and Data Analytics Intern

Jul. 2026 – Present

Keyrus Colombia | Data consulting; Power BI to Tableau dashboard migration

- Designed and built an internal Django application that reads PBIX files, scores dashboard complexity with AHP and estimates Tableau migration hours with PERT. The team uses its estimates; formal deployment is pending.
- Built a DRF API, Celery and Redis background analysis, PostgreSQL persistence and an eleven-sheet Excel workbook per dashboard on a hexagonal architecture.
- Prepared and validated data with SQL and Python for dashboard analysis and migration.

Projects: internal PBIX migration estimation tool.

Freelance Full Stack Developer

Feb. 2025 – Mar. 2026

TotalDev SAS | Custom software; overlapped with PARQ until Jul. 2025

- Added MT message support to a Java/Apache Camel gateway: MT103 and MT202 parsers and validators, JSON mapping files, and automated MT to pacs.008 and pacs.009 to MT202 flows.
- Built most of an electoral inventory platform in Laravel and React: bulk imports with row-level errors, department and municipality permissions, Excel reports, and queued, cached PDF and ZIP generation.
- Built a QR-scanning PWA for plant operators with its Filament backend, and guest registration with one-use QR codes and event-driven email.

Projects: SWIFT/ISO 20022 gateway, Invex, Materiales de la Sabana, Chivas House, Biosimtec, RUS and an inspection system.

Full Stack Developer

Nov. 2024 – Jul. 2025

PARQ | Parking platform for Colombia, Mexico and the UK

- Extended the SATCOM, Siigo and Alegra electronic invoicing connectors in a Laravel middleware: queued resend of failed invoices, company registration with providers, and per-request tracing.
- Maintained NestJS services on TypeORM and shared PostgreSQL: country-specific rates, queued bulk membership creation and consistent timezones in reports; fixed production data inconsistencies.
- Built the corporate Next.js site with SSR, i18n and SEO; documented APIs with OpenAPI and took part in Docker and Portainer deployments.

Projects: electronic invoicing middleware, NestJS services, Next.js corporate site.

Backend Developer

Jan. 2023 – Nov. 2024

SEREMPRE | Started as a SENA intern; permanent contract from Jul. 2023

- Handled L2/L3 production incidents and joined war rooms; diagnosed failures through SQL, code review and Sentry, and documented root causes.
- Built Laravel APIs for a benefits platform in more than five Latin American countries, with queues for validated payment uploads, duplicate cleanup and notifications.
- Built queries, PL/SQL procedures and Excel exports for other teams; optimized large listings and used Docker/DDEV for legacy systems.

Projects: Membeers (AB InBev), Story Training, RUS ten-year insurance module.

EDUCATION

Systems and Computer Engineering | UPTC, Tunja

Expected 2026

Information Systems Analysis and Development (technologist) | SENA

2022

SKILLS

Languages: Python, TypeScript, PHP, Java, SQL

Backend: Django, DRF, Celery, NestJS, Laravel, Filament, Apache Camel, REST, OpenAPI

Data: PostgreSQL, MySQL, Oracle PL/SQL, Redis, pandas, Excel, Power BI, Tableau

Operations: L2/L3 diagnosis, Sentry, Docker, Portainer, GitHub Actions, Linux

Languages: Spanish native; English B2.
