SUMMARY

Backend engineer with 3+ years of remote experience building REST APIs, integrations and internal tools with Python/Django, NestJS, Laravel and Java. Experienced in SWIFT/ISO 20022 financial messaging, electronic invoicing with SATCOM, Siigo and Alegra, SQL on PostgreSQL, MySQL and Oracle, queue-based processing and L2/L3 production support with root cause analysis. Currently working in BI and data analytics with Power BI, Tableau and Python.

WORK EXPERIENCE

BI and Data Analytics Intern

Jul. 2026 – Present

Keyrus Colombia

Remote

Data and analytics consulting. Power BI to Tableau dashboard migration.

- Designed and built an internal Django application that reads PBIX files, scores dashboard complexity with AHP and estimates Tableau migration hours with PERT. The team uses its estimates; formal deployment is pending.
- Built a DRF API, Celery and Redis background analysis, PostgreSQL persistence and an eleven-sheet Excel workbook per dashboard on a hexagonal architecture.
- Prepared and validated data with SQL and Python for dashboard analysis and migration.

Freelance Full Stack Developer

Feb. 2025 – Mar. 2026

TotalDev SAS

Remote

Custom software for banking, electoral, insurance and industrial clients.

- Added MT message support to a Java/Apache Camel gateway: MT103 and MT202 parsers and validators, JSON mapping files, and automated MT to pacs.008 and pacs.009 to MT202 flows.
- Built most of an electoral inventory platform in Laravel and React: bulk imports with row-level errors, department and municipality permissions, Excel reports, and queued, cached PDF and ZIP generation.
- Built a QR-scanning PWA for plant operators with its Filament backend, and guest registration with one-use QR codes and event-driven email.

Full Stack Developer

Nov. 2024 – Jul. 2025

PARQ

Remote

Parking platform operating in Colombia, Mexico and the UK.

- Extended the SATCOM, Siigo and Alegra electronic invoicing connectors in a Laravel middleware: queued resend of failed invoices, company registration with providers, and per-request tracing.
- Maintained NestJS services on TypeORM and shared PostgreSQL: country-specific rates, queued bulk membership creation and consistent timezones in reports; fixed production data inconsistencies.
- Built the corporate Next.js site with SSR, i18n and SEO; documented APIs with OpenAPI and took part in Docker and Portainer deployments.

Backend Developer

Jan. 2023 – Nov. 2024

SEREMPRE

Remote

Members (AB InBev) benefits platform for Latin America. Joined as a SENA intern.

- Handled L2/L3 production incidents and joined war rooms; diagnosed failures through SQL, code review and Sentry, and documented root causes.
- Built Laravel APIs for a benefits platform in more than five Latin American countries, with queues for validated payment uploads, duplicate cleanup and notifications.
- Built queries, PL/SQL procedures and Excel exports for other teams; optimized large listings and used Docker/DDEV for legacy systems.

EDUCATION

Bachelor of Engineering in Systems and Computer Engineering

Expected 2026

Universidad Pedagógica y Tecnológica de Colombia (UPTC)

Tunja, Colombia

Technologist in Information Systems Analysis and Development

2022

Servicio Nacional de Aprendizaje (SENA)

Tunja, Colombia

TECHNICAL SKILLS

Languages: Python, TypeScript, PHP, Java, SQL

Backend: Django, DRF, Celery, NestJS, Laravel, Filament, Apache Camel, REST, OpenAPI

Data: PostgreSQL, MySQL, Oracle PL/SQL, Redis, pandas, Excel, Power BI, Tableau

Operations: L2/L3 diagnosis, Sentry, Docker, Portainer, GitHub Actions, Linux

Spoken languages: Spanish (native), English (B2)
